

# **CS4363/5363 Computer Vision**

## **Fall 2022**

### **Tracking**

1. Run the provided tracking program and determine which of the trackers yields the best performance.
2. Create a short video using your webcam and test the tracking program with it.
3. Implement a real-time face tracker using your webcam. To simplify, specify a region-of-interest bounding box near the middle of the image and make sure your face is in that region when you start.
